

# JSP - 회원관리 및 게시판 구현1

## [JSP 4-2](#)

### 회원 및 게시판 시스템 구현 (1편)

### 데이터베이스 구성

#### ◆ 회원 테이블 (MYMEMBER)

```
CREATE TABLE MYMEMBER(  
  ID NVARCHAR2(10) PRIMARY KEY,  
  PW NVARCHAR2(20) NOT NULL,  
  NAME NVARCHAR2(10) NOT NULL,  
  PHONE NVARCHAR2(30) NOT NULL  
);
```

#### ◆ 게시판 테이블 (MYBOARD)

```
CREATE TABLE MYBOARD(  
  BOARD_ID NUMBER(4) PRIMARY KEY,  
  WRITER NVARCHAR2(50) NOT NULL,  
  TITLE NVARCHAR2(50) NOT NULL,  
  CONTENT NVARCHAR2(500) NOT NULL,  
  BOARD_DATE TIMESTAMP DEFAULT SYSTIMESTAMP,  
  HIT NUMBER(4) DEFAULT 0  
);
```

#### ◆ 게시판 시퀀스

```
CREATE SEQUENCE BOARD_SEQ  
START WITH 1  
INCREMENT BY 1  
NOMAXVALUE  
NOCACHE;
```

```

package com.myBoard;

import java.sql.Timestamp;

public class MyBoardData
{
    private int boardID;
    private String writer;
    private String title;
    private String content;
    private Timestamp boardDate;
    private int hit;

    public MyBoardData() {
    }

    public MyBoardData(int boardID, String writer, String title, String content, Timestamp boardDate, int hit)
    {
        super();
        this.boardID = boardID;
        this.writer = writer;
        this.title = title;
        this.content = content;
        this.boardDate = boardDate;
        this.hit = hit;
    }

    public int getBoardID() {
        return boardID;
    }

    public void setBoardID(int boardID) {
        this.boardID = boardID;
    }

    public String getWriter() {
        return writer;
    }

    public void setWriter(String writer) {
        this.writer = writer;
    }

    public String getTitle() {
        return title;
    }

    public void setTitle(String title) {

```

## 로그인

### loginForm.jsp

- 사용자로부터 ID, PW 입력 받음

```

<form action="loginFormCheck.jsp" method="post" name="LoginForm" id="LoginForm">
    <div id="title"><h4>Login</h4></div>
    <div class="input-group">
        <label for="id">ID</label>
        <input type="text" name="id" id="id" required>
    </div>
    <div class="input-group">
        <label for="pw">Password</label>
        <input type="password" name="pw" id="pw" required>
    </div>
    <button type="submit" class="btn login">로그인</button>
    <button type="button" class="btn register" onclick="location.href='joinForm.jsp'">회원가입</button>
</form>

```

### loginFormCheck.jsp

- 입력값 검증 후, DB 조회
- 성공 → 세션 등록 + 메인 페이지 이동
- 실패 → `history.back()`

```
<%
request.setCharacterEncoding("UTF-8");

String id = request.getParameter("id");
String pw = request.getParameter("pw");

System.out.println("id: " + id + ", pw: " + pw);

BoardMethod bm = new BoardMethod(); // BoardMethod 객체 생성
boolean result = bm.loginCheck(id, pw);
System.out.println("로그인 결과: " + result);

if(result) // 로그인 성공
{
    session.setAttribute("userId", id); // 세션에 사용자 ID 저장
}%>
<script>
alert("환영합니다, <%= id %>님!");
</script>
<%
    response.sendRedirect("main.jsp");
}
else // 로그인 실패
{
}%>
<script>
alert("로그인에 실패했습니다. 아이디와 비밀번호를 확인해주세요.");
history.back(); // 이전 페이지(로그인 페이지)로 돌아가기
</script>
<%
}
%>
```

## 회원가입

### joinForm.jsp

- 입력값 공백 검사, JS로 유효성 체크

```

<form action="joinFormCheck.jsp" method="post" id="joinForm" onsubmit="formCheck(event)">
  <h2>회원가입</h2>
  <div class="input-group">
    <label for="id">아이디</label>
    <input type="text" name="id" id="id">
  </div>
  <div class="input-group">
    <label for="pw">비밀번호</label>
    <input type="password" name="pw" id="pw">
  </div>
  <div class="input-group">
    <label for="pw2">비밀번호 확인</label>
    <input type="password" name="pw2" id="pw2">
  </div>
  <div class="input-group">
    <label for="name">이름</label>
    <input type="text" name="name" id="name">
  </div>
  <div class="input-group">
    <label for="number">전화번호</label>
    <input type="text" name="number" id="number">
  </div>
  <button type="submit" class="submit-btn">회원가입 하기</button>
</form>

```

## joinFormCheck.jsp

- BoardMethod.joinMember() 호출 → DB INSERT

```

<%
request.setCharacterEncoding("UTF-8");

String id = request.getParameter("id");
String pw = request.getParameter("pw");
String name = request.getParameter("name");
String number = request.getParameter("number");

BoardMethod bm = new BoardMethod();

int result = bm.join(id, pw, name, number);

if(result == 1)
{
    %>
    <script>
        alert("회원가입에 성공하였습니다!");
    </script>
    <%
        response.sendRedirect("loginForm.jsp");
    %>
}
else
{
    %>
    <script>
        alert("회원가입에 실패하였습니다.");
        history.back();
    </script>
    <%
    %>
}
%>

```

## 메인 페이지

### 구성

- 로그인 사용자 ID 표시
- 로그아웃, 회원정보 수정, 글쓰기 버튼
- 게시글 목록 출력

```

4<body>
5<%
6 request.setCharacterEncoding("UTF-8");
7 BoardMethod bm = new BoardMethod();
8 String id = (String)session.getAttribute("userId");
9 %>
10<header>
11    <h2><span id="userId"><%= id %></span>님 안녕하세요!</h2>
12    <div id="headerMenu">
13        <button class="headerBtn" onclick="location.href='logout.jsp'">로그아웃</button>
14        <button class="headerBtn" onclick="location.href='editMember.jsp'">회원정보 변경</button>
15        <button class="headerBtn" onclick="location.href='write.jsp'">글쓰기</button>
16    </div>
17</header>
18<article>
19    <table>
20        <thead>
21            <tr>
22                <th class="number">번호</th>
23                <th class="title">제목</th>
24                <th class="author">작성자</th>
25                <th class="date">작성날짜</th>
26                <th class="views">조회수</th>
27            </tr>
28        </thead>
29        <tbody>
30            <%
31                List<MyBoardData> contentList = bm.getContentList();
32                SimpleDateFormat sdf = new SimpleDateFormat("yyyy-MM-dd HH:mm");
33
34                for(MyBoardData board : contentList) {
35            %>
36                <tr>
37                    <td class="number"><%= board.getBoardID() %></td>
38                    <td class="title">
39                        <a href="viewContent.jsp?boardID=<%=board.getBoardID()%>&action=upHit">
40                            <%= board.getTitle() %>
41                        </a>
42                    </td>
43                    <td class="author"><%= board.getWriter() %></td>
44                    <td class="date"><%= sdf.format(board.getBoardDate()) %></td>
45                    <td class="views"><%= board.getHit() %></td>
46                </tr>
47            <%
48                }
49            %>
50        </tbody>
51    </table>
52</article>

```

- getContentList() 로 게시글 목록 조회
- 반복문으로 테이블 출력

## 🔒 로그아웃

- 세션 해제 후 loginForm.jsp로 이동

```

<body>
<%
    session.removeAttribute("userId");
%>
<script>
    alert("로그아웃 되었습니다.");
    location.href = "loginForm.jsp";
</script>

```

## 회원 정보 수정

### editMember.jsp

- 기존 정보 value 속성에 바인딩
- `hidden` input 통해 id 전달

```
<%
request.setCharacterEncoding("UTF-8");

BoardMethod bm = new BoardMethod();

String id = (String)session.getAttribute("userId");

String pw = bm.getPw(id);
String name = bm.getName(id);
String phone = bm.getPhone(id);
%>
<div class="form-container">
  <h2>회원정보 수정</h2>
  <form action="editMemberCheck.jsp" method="post" id="editMemberForm">
    <input type="hidden" value="<%= id %>" name="id">

    <div class="form-group">
      <label for="id">아이디:</label>
      <div class="id-display" id="id"><%= id %></div>
    </div>

    <div class="form-group">
      <label for="updateName">이름:</label>
      <input type="text" name="updateName" id="updateName" value="<%= name %>" required>
    </div>

    <div class="form-group">
      <label for="updatePW">비밀번호:</label>
      <input type="password" name="updatePW" id="updatePW" value="<%= pw %>" required>
    </div>

    <div class="form-group">
      <label for="updateNumber">전화번호:</label>
      <input type="text" name="updateNumber" id="updateNumber" value="<%= phone %>" required>
    </div>

    <input type="submit" value="변경하기" class="submit-btn">
  </form>

  <!-- 회원탈퇴 버튼을 별도의 form으로 분리 -->
  <form action="deleteMember.jsp" method="post">
    <input type="hidden" name="id" value="<%= id %>">
    <button type="submit" class="delete-btn">회원탈퇴</button>
  </form>
</div>
</body>
```

### editMemberCheck.jsp

```

<%
request.setCharacterEncoding("UTF-8");

String id = (String)session.getAttribute("userId");
String updatePW = request.getParameter("updatePW");
String updateName = request.getParameter("updateName");
String updateNumber = request.getParameter("updateNumber");

BoardMethod bm = new BoardMethod();

int result = bm.updateMemberInfo(updatePW, updateName, updateNumber, id);

if(result == 1)
{
    %>
    <script>
        alert("회원 정보가 변경되었습니다!");
        window.location.href = "loginForm.jsp";
    </script>
    <%
}
else
{
    %>
    <script>
        alert("회원 정보 변경에 실패하였습니다!");
        history.back();
    </script>
    <%
}
%>

```

**deleteMember.jsp**

```

3 <body>
4 <%
5 String id = request.getParameter("id");
6
7 BoardMethod bm = new BoardMethod();
8
9 int result = bm.deleteMember(id);
10 if(result == 1)
11 {
12     %>
13     <script>
14         alert("회원 탈퇴가 완료되었습니다.");
15         location.href="loginForm.jsp";
16     </script>
17     <%
18 }
19 else
20 {
21     %>
22     <script>
23         alert("오류가 발생하였습니다.");
24         history.back();
25     </script>
26     <%
27 }
28 %>

```
